**27 MAY 2025 -
START OF SCHOOL**
(STAGGERED END DATES)

**500 MACREADY
AVE.
MONROE, OH**

ENROLL NOW! 513-402-7318 swatts@eickacademy.com amuniz@eickacademy.com www.eickacademy.com

Week One

Green Thumb - The Future of Gardening: The future of gardening is all about growing food in smart, eco-friendly ways. With techniques like hydroponics and organic gardening, we'll be able to grow food without harming the Earth. Small urban gardens will help us grow more food in cities, making us more self-sufficient and healthier.

Week Two

Down on the Farm - Ethical Farming: Farming in the future will be kinder to animals and the Earth. Instead of harmful chemicals and factory farming, farmers will use sustainable methods that protect the land, treat animals well, and produce healthier food. This will help feed the world in a more ethical way.

Week Three

A Bugs Life - Heroes of the Ecosystem: Insects are crucial for keeping nature healthy. They pollinate plants, break down waste, and are an important food source. To protect the planet, we'll need to stop harming bugs and find ways to create environments where they can thrive.

Week Four

Rainforest Adventure - Saving the Rainforest: Rainforests supply 20% of the world's oxygen, providing a crucial piece of our ecosystem, in addition to many other important economical and medicinal contributions, even though they cover less than 7% of the Earth's surface!

Week Five

Under the Sea - Ocean Conservation & Undiscovered Species: We'll take a deep dive into the deep blue that covers the majority of the Earth's surface. The ocean is home to mountains, masters of disguises, incredible creatures, and remnants of history. With only 5% of the ocean explored, there's a lot more to be discovered!

Week Six

Reduce, Reuse, Recycle - Sustainability & Environmental Responsibility: In the future, we'll all do a better job of recycling and reusing materials. By using less plastic and waste, we can protect the planet. More people will make sustainable choices that help create a world with less trash and more sustainable resources for the future.

Week Seven

Captain Planet - The Power is Yours: Inspired by the fictional Captain Planet, real-world heroes work together to fight pollution, conserve resources, and protect nature. In the future, people all around the world will unite to solve environmental problems and make the planet healthier.

Week Eight

Storm Watchers - Observing the Weather & Planning Ahead: In the future, we'll be better at predicting and preparing for extreme weather events like storms, floods, and droughts. With new technology, we'll be able to protect people and communities from the worst impacts of climate change.

Week Nine

The Great Outdoors - Let's Go Off-grid: Spending time in nature will always be important. In the future, more areas will be protected so animals and plants can thrive. People will also focus on enjoying nature in a way that doesn't harm it, ensuring we keep the Earth beautiful for years to come.

Week Ten

Sports & Fitness Week - Let's Get Moving: From hiking and backpacking to outdoor yoga and water-based activities, there are countless ways to enjoy fitness and nature.

Week Eleven

Survivor - Put Your Knowledge to the Test: It's time to put it all together for the ultimate challenge - What could you build to power your home in an energy crisis? How could you sustainably grow and store food while living off the grid? Let's show off what we've learned during our end of summer bash!

Tuition Rates 2025 Summer Camp

All Programs require a \$100.00 Non-Refundable Enrollment Fee due at the time of enrollment. The fee will be applied towards the first week's tuition.
